

# QUARTER TWO

## 2022-2023

In today's world, technology is a fundamental part of society, and it is important that our kids are prepared for this. In school, technology is revolutionizing the learning experience and offering new opportunities for student engagement, collaboration, and imaginative ideas — helping today's students prepare for success in an increasingly competitive world.

Our school community understands the benefits of trusting students' capabilities, encouraging creativity, and giving them an opportunity to own their learning. With the help of technology, our students have the chance to make decisions, manage discussions, and take agency in their learning. This agency enables every student to know that they are valued, can contribute to the classroom, and have the foundation to one day actively participate in society. For example, the project based learning environments that have been established in our district offer students autonomy and ownership of their learning and create engaging classroom cultures that show students how their work contributes and has purpose.

It is no mystery that we are all here to prepare our kids for an enigmatic future. As educators, we have a responsibility to lay the foundations of 21st century learning for kids now, so that they can thrive in their future careers. From my vantage point, these first two quarters have been wildly successful for our students' future success! I fully believe that the main catalyst for this manifestation is the dedication of the amazing staff members that we have within our district. As I travel throughout the buildings co-planning, supporting, and doing everything else EdTech related, I am galvanized by the risks taken and vulnerability shown by our staff. It truly is inspiring to see so many staff members add educational technology to their pedagogy with the hopes of accelerating student learning, and I look forward to being a part of even more incredible things during the second half of the school year!

**63%**

OF TEACHERS AT CIS HAVE HELPED THEIR STUDENTS DEVELOP SKILLS FOR FUTURE SUCCESS BY CARRYING-OUT PROJECT BASED LEARNING UNITS IN THEIR CLASSROOMS

**STUDENT DATA**

HAS BEEN COLLECTED USING EDTECH BY THE TEACHERS AT THE JR./SR. HS IN ORDER TO DRIVE INSTRUCTION

**4**

TEACHERS HAVE COMPLETED THE TRIPLE E FRAMEWORK FOR TECHNOLOGY INTEGRATION WORKSHOP

# LOOKING AHEAD

As stated previously, the amount of wonderful things that our staff is doing for our kids has been amazing! Seeing the students excited to dive into educational technology with their teachers is truly laying a solid foundation for our kids to become positive digital citizens! As we move ahead during the third quarter, we look to build on all of our successes, and a few of those include:

- offer more Happy Hour professional learning opportunities for staff to expand their pedagogy for better student achievement.
- cultivate the skills needed for future success in our students by continuing to incorporate Project Based Learning.
- maintain the collection of student data so that the needs of every student can be met.
